

LEAD SHIELDED WINDOWS FOR MEDICAL APPLICATIONS

European EMC Products Ltd

The use of ionising radiation in medical applications, such as X-Ray, CT, fluoroscopy and mammography rooms is essential and well established. Equally important is the radiation protection for the general public and operators. A number of materials can be used for radiation protection, but lead is the most common. Where windows or viewing screens are needed these required glass containing lead and barium to give the required protection.

EEP can supply, or supply and install lead shielded windows for all types of medical applications.

As each project is unique, EEP can supply windows with a wide range of frame designs and finishes to match the rest of a building. All additional requirements, such as fire and acoustic ratings, can be included.
