

## Virtual Skylite Installation User Review - Brampton Dental Practice

Brampton Dental Practice, an expanding practice who prides itself in providing quality private dental care for the whole family, have recently upgraded their current visuals within their dental suite to our, European EMC Products, Silentlite, Virtual Skylite system to assist in improving the patients overall experience whilst attending the practice.

Prior to the installation Mark Moran, Principle Dentist at Brampton Dental Practice, viewed a selection of high definition images from our standard range and chose the view through the trees image to be used above his chair. Following the installation of a lighting circuit by the practices own electrician the existing, non-illuminated, visuals and insulation were removed and our installation engineer went on to install our Virtual Skylite panels. It was decided at the pre-installation meeting that a dimmer switch was not required, therefore a simple on/off switch was installed.

Before Installation

The seamless installation of the 3 x 2 panels was undertaken out of practice hours to ensure there was no disruption to patient's appointments. The choice of image compliments the dental suites existing colour scheme and provides a scene for patients to immerse themselves in, and subsequently aid in their relaxation during procedures.
